Exercise 2.1 (Small 3/2 points)

Java/Swing:

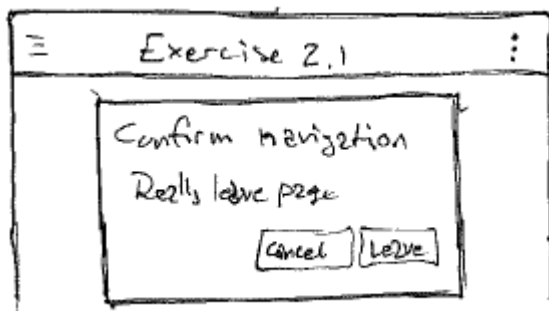

Build an application which displays, using `JOptionPane`, as a response to `onWindowClosing` event, a "Really close?" confirmation. If the user selects "No", window should not close.

The same confirmation must appear when a user selects "File" -> "Exit" from the application menu. File menu should also have an "Open" option, which gives an error message: "Not implemented" using `JOptionPane`.

React/Material-UI

Build an application, which has `AppBar` with a menu containing an option to navigate to a new web page. The selection must display a confirmation `<Dialog>` and move to another page only if the user confirms.

PS. Navigation to another page is possible, e.g., by:

```
window.location.href = "http://uta.fi";
```
